IT314 Software Engineering

Part of the requirements not completed/implemented in the project (Future Scope)

1. **Videos can't be posted in post.**
   The StartApp platform currently lacks the capability for both individuals and organizations to post videos within their posts. This limitation restricts the expressive and informative potential of the platform, as videos can be powerful tools for conveying ideas, showcasing products or services, and engaging the audience on a deeper level. Implementing a video posting feature would enhance the richness of content shared on StartApp, allowing users to visually communicate their concepts, achievements, and innovations. However, videos will require more storage space in the database. Due to limited available space in the database server that we have used, we were not able to implement this functionality in the StartApp. It can be implemented if sufficiently large database is available.

2. **Post can't be shared.**
   As it stands, there is no provision for individuals or organizations to share posts with others on the StartApp platform. Post sharing is a fundamental aspect of social interaction and collaboration, enabling users to amplify the reach of valuable content and ideas. Integrating a post sharing functionality would facilitate the seamless dissemination of innovative concepts, fostering a wider collaborative environment where users can promote and support each other's endeavours. This feature would contribute to the platform's goal of creating a dynamic nexus for collaboration.
   The feature of post sharing is not available, but the user can share the link of a post with another user, and the other user can view the post through link. So, this functionality is more or less implemented.

3. **Communities can't be formed to connect with like-minded people.**
   Currently, StartApp lacks the capability for users to form communities within the application and connect with like-minded individuals. Communities play a pivotal role in fostering collaboration, knowledge sharing, and networking. By introducing a community feature, users would be able to create or join groups

centred around specific interests, industries, or themes. This enhancement would further promote meaningful discourse, collaboration, and the formation of valuable connections within the StartApp ecosystem, aligning with the platform's objective of being a hub for collaborative endeavours.

The app's main aim is to help the innovative and emerging startups. There are currently idea sharing events, funding events and jobs platform available on the website. There is no provision to make other communities as of now.
